

MASTER CONTROL PROGRAM (MCP) Disable Keyboard feature

To Disable the keyboard:

Move the mouse cursor to the bottom RIGHT corner of the clock window.

An orange letter "K" will appear at the bottom of the window.

The keyboard is now disabled, and you may move the mouse away from that corner to avoid students' discovery of this secret.

To Re-enable the keyboard:

Move the mouse cursor to the bottom LEFT corner of the clock window.

The orange letter "K" should disappear, making the keyboard active.

Again, covertly moving the cursor away from that corner will help maintain this secret.

USAGE TIP: Be cautious yet nonchalant when doing this -- we don't want students knowing.

This is especially useful while using the teach-timer feature of the clock and/or the [T]est mode.
